Receipt of order

June 5, 2015

Test samples

Regulator DURA OXYGEN 10 according to assembly drawing

no. 901 3050 126 of October 27, 2011;

BAM-Order-No.: 2.1/52 706

Receipt of samples

August 21, 2015

Test date

August 31, 2015

Test location

Working Group "Safe Handling of Oxygen"; building 41, room 120

Test procedure according to

EN ISO 2503:2009, chapter 9.7.4 "Ignition test for pressure

regulators and pressure regulators with flow-metering devices for

oxygen" and German Code of Practice M 034e, Oxygen",

edition 6/2010

All pressures are excess pressures. This test report consists of page 1 to 4

This test report may only be published in full wording and without any additions. A revocable written consent shall be obtained from BAM beforehand for any amended reproduction or the publication of any excerpts. The content of the test

report refers exclusively to the objects/materials tested.

The German version is legally binding, except an English version is issued exclusively.

2015-06 / 2015-09-17

1 Documents and Samples

Three samples for a test pressure of 360 bar and one set of drawings listed in the following table were delivered to BAM:

Drawing No.	Revision	Date
9 01 3050 126, 2 pages	NR	27.10.2011
E 12907 A	NR	15.10.2011
E12886	NR	12.10.2011
74629	NR	07.11.2011
E 12911	NR	08.11.2011
901 3053 003	NR	22.10.2011

2 Testing for Burn-Out Safety

2.1 Test Procedure

The samples were tested according to EN ISO 2503:2009, chapter 9.7.4 "Ignition test for pressure regulators and pressure regulators with flow-metering devices for oxygen". A connecting tube with a length of 1000 mm and an inner-diameter of 5 mm was used between the sample and the quick opening valve by means of an adapter. By opening of the hydraulically-operated quick-opening valve the samples were exposed to oxygen pressure shocks. In the open position the outlet was closed with a blind plug.

Test Pressure:	360	bar
Oxygen Temperature:	60	°C
Pressure Rise Time		
(from atmospheric pressure to test pressure):	20	ms
Number of Pressure Shocks:	20	
Interval Between Pressure Shocks:	30	S
Pressure Hold Time	10	S

2.2 Check of Drawings

The dimensions of the parts in the above-listed drawings were compared with these drawings.

3 Test Results

3.1 Burn-Out Safety

All samples passed the test. Neither damage to the materials nor any reaction of the materials with oxygen could be observed.

3.2 Check of Drawings

In the note of drawing no. E12886 the material "DAIKIN M 400H SHORE HARDNESS 75-80°D" was deleted in accordance with the information of ESAB (e-mail of October 8, 2015).

More differences were not found.

4 Summary and Evaluation

On basis of the test results BAM has no objections, with regard to the burn-out safety to oxygen pressure shocks, to use the Regulator DURA OXYGEN 10 according to assembly drawing no. 901 3050 126 of October 27, 2011, for 360 bar oxygen working pressure and 60 °C oxygen temperature. According to the German Code of Practice M 034 and BAM's safety philosophy aluminium shall be used only up to an oxygen pressure of 10 bar. Therefore, the requirements concerning the burn-out safety are only fulfilled, if washer seals of aluminium are not used in the oxygen-wetted areas.

The drawings listed in section 1, marked by BAM, are part of this report.

This report expires at once, if the nonmetallic materials in the oxygen wetted area are exchanged for different ones that were not used in the samples tested.

Construction series "FRAX"

The devices of construction series "FRAX" are vacuum regulator valves, which, within the scope of this certificate, may only be put into circulation and applied in conjunction with one of the following safety devices, according to standard DIN EN 730-1:2003:

- 1) Safety devices of Company ESAB
- with FRT with the designation FRAX10
- with FR91T with the designation FRAX20

The safety devices FRT and FR91T have already been certified by BAM and form constituent parts of this certificate.

The vacuum regulator valve "FRAX" as single device has been successfully tested regarding flashback resistance based on standard DIN EN 2:2003, Article 5.7 up to the following maximum operating pressures:

			max. operating	max. operating overpressure (MPa)	a)	
BAIM test report	acetylene	propane	methane	MAPP	02	H ₂
BZS-63/05 (II-1090/05) of 12.07.05 BZS-48/07 of 12.06.07	0.15	0.5	0.5			0.35

The maximum operating pressure of the combined devices vacuum regulator valve / safety device corresponds to the lowest maximum operating pressure of both single devices. The combination of both devices is flame transmission resistant according to standard DIN EN 730-1:2003 only up to this maximum operating pressure.

Quick-action couplings according to DIN EN 561:2002

The quick-action couplings meet the requirements of Articles 6 and 7 of standard DIN EN 561:2002 for the respective gases and maximum operating overpressures.

In addition, each quick-action coupling shall be designated according to Article 10 of standard DIN EN 561:2002.
